

MODBUS Programmable Fieldbus Controller;

150 (1200) baud ... 19.2 (115.2) kbaud; dig. and anal. signals

The programmable fieldbus controller for MODBUS is an expansion of the WAGO-I/O-SYSTEM.

This controller combines the WAGO fieldbus coupler for MODBUS with the functionality of a PLC. Programming of the application is done with WAGO-I/O-PRO 32 in accordance with IEC 61131-3, covering all 5 programming languages. The programmer can access all fieldbus and I/O data.

Characteristics and use:

- The use of decentralized control can better support a PLC or PC
- Signal pre-processing reduces fieldbus transmissions
- Complex applications can be divided into multiple tasks
- Tasks can be prioritized
- Peripheral equipment can be controlled directly, resulting in faster system response times
- Programmable response in the event of a fieldbus failure
- Simple, self-sufficient control
